

Question). Describe the best project you have worked on, including links if any

I made an Expense tracker using HTML, CSS, Javascript and React.js .

In this user can add their expenses and the same is displayed in aesthetic User Interface.

Link: <https://github.com/anuj544/expense-tracker-react>

Question).If you are to start a software company, name 2 people from your batch whom you will choose as your partner and why?

Anyone who is curious and has an ability to contribute and built great products. Also, someone who is very good team player and coordinates in the team quite well. Anybody who has these type of qualities is likely to become a great contributor/partner . If I were to choose 2 people I would pick myself and my batchmate Vivek.
